

A B S T R A C T

5 The invention relates to a multi-standard mobile
telecommunications terminal adapted to operate with base
stations of a public cellular network and at least one
fixed part of at least one preferred cordless telephone
local network, the terminal including communication means
for communicating with each of said networks and
switching means including means for searching for a fixed
10 part of a local network and commanding the communication
means to operate with one or the other of said networks
according to the result of the network search conducted
by the search means. The terminal further includes means
for programming and processing events triggering a search
15 for the fixed part or parts of the local networks in
which the terminal can operate, said programming and
processing means activating the search means on the
occurrence of programmed triggering events.
